                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P3, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, mycoardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases with as hypertrophy, improved the molecules of the property and the seases with as hypertrophy, improved the molecules of the property and the seases when as the participants of the property and the property and

                                                                                                                                                                                                         antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; and immunostimulant. The proteins and polymucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polymucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thromboorytopaemia, wounds, burns, uccers, osteoporosis, severe combined immunodeficiency, eczema, allergic rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression, alzenier's disease, parkinson's disease, neurodegenerative and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAH99166 to AAH99904 encode the human proteins given in AAM2525 to AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-DEC-1999; 99US-0471275.

                                                                                                                                                                                                                      CC The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor, receptor, glucagon, interleukin 6, cc platelet-derived endothelial cell growth factor, receptor, intestinal ccl polypeptide receptor 2. The polypeptides and vasoactive intestinal ccl polypeptide receptor 2. The polypeptides and their associated mucleic cardis are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various cc disorders including cardiovascular diseases such as arctiosclerosis, cc myocardial infarction and coronary arterial thrombosis, renal diseases cc immune disorders such as immune complex nephritis, multiple sclerosis, cc cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as abestosis and vascular pathologies involving an endothelial cc abnormality such as deep vein thrombosis.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

HEMIDESMOSOMES. COULD ALSO BIND MUSCLE PROTEINS SUCH AS ACTIN TO DESMOSOMES OR HEMIDESMOSOMES. COULD ALSO BIND MUSCLE PROTEINS SUCH AS ACTIN TO MEMBRANE COMPLEXES IN MUSCLE. MAY BE INVOLVED NOT ONLY IN THE CROSSLINKING AND STRABILIZATION OF CYTOSKELETAL INTERMEDIATE FILMMENTS NETWORK, BUT ALSO IN THE REGULATION OF THEIR DYNAMICS.

-!- SUBUNIT: HOMODIMER OR HOMOTETRAMER.

-!- ALTERNATIVE PRODUCTS: 3 ISOFORMS; 1 (SHOWN HERE), 2 AND 3; ARE PRODUCED BY ALTERNATIVE SPLICING.

-!- PRODUCED BY ALTERNATIVE SPLICING.

-!- DISABLE, HEART, PLACENTA AND SPINAL CORD.

-!- DOMAIN: THE N-TERMINUS INTERACTS WITH HIGHEST LEVELS IN MUSCLE, HEART, PLACENTA AND SPINAL CORD.

-!- DOMAIN: THE N-TERMINUS CAN BIND INTEGRIN BETA-4.

-!- DISABLE: DEFECTS IN PLEC1 ARE THE CAUSE OF THE REMIDESMOSOME AND ASSOCIATED AND STROPHY (MD-EBS OR EB-MD), AN AUTOSOMAL RECESSIVE DISORDER CHARACTERIZED BY EPIDERMAL BLISTER FORMATION AT THE LEVEL OF THE HEMIDESMOSOME AND ASSOCIATED LATE-ONSET MUSCULAR DYSTROPHY.

-!- SIMILARITY: CONTAINS 1 ACTIN-BINDING DOMAIN.

-!- SIMILARITY: CONTAINS 3 PLECTIN REPEATS.

-!- SIMILARITY: CONTAINS 4 SPECTRIN REPEATS.

-!- SIMILARITY: CONTAINS 4 SPECTRIN REPEATS.

-!- SIMILARITY: CONTAINS 4 SPECTRIN REPEATS.

-!- SIMILARITY: BELONGS TO THE DLAKIN OR CYTOLINKER FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VARIANT MD-EBS LEU-429 INS.
